

- Glad everybody made it here (Hannah)
- This is a really important step for CakePHP
 - First commercial project
 - Bear with us
 - More things to come
 - Goal for CakePHP - get the benefits from enterprise / proprietary / open source world combined for a better experience
- Apologize about transportation again

First Steps in the Kitchen

An Introduction to CakePHP

Cindy's Cell#

404 643 3376

Main track: Solid PHP Dev -> Solid CakePHP Dev
2nd room: 1 to 1 consulting, questions, ad-hoc sessions
(flex, jquery, git, ...)

- Thanks for filling out the survey
- We have 0-24 month of experience
- It is hard to get rid of all your assumptions
- Feel free to interrupt, and or get help in the 2nd room
-

Goal of the Workshop

Code, Slides & more

The Application

Hello World

svn export
git svn clone

vendor branching (svn)
just overwrite the cake core

definitely keep cake core under version control (team)

Setting up CakePHP

Dispatching

/posts/view/hello-world

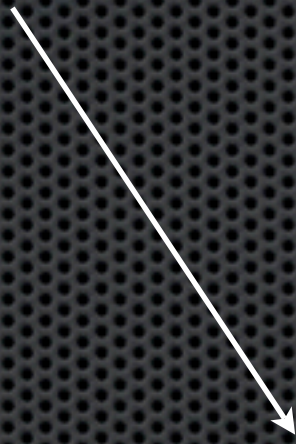

Dispatching

/posts/view/hello-world

PostsController::view('hello-world')

Dispatching

/posts/view/hello-world

PostsController::view('hello-world')

Routes

Routes

- `app/config/routes.php`

Routes

- `app/config/routes.php`

`/users/signup -> /signup`

Routes

- app/config/routes.php

/users/signup -> /signup

```
Router::connect('/signup', array(  
    'controller' => 'users',  
    'action' => 'signup'  
));
```
